

Making space for water to manage risks and to create resilience

Dr ir Frans H.M. van de Ven

31 March 2015

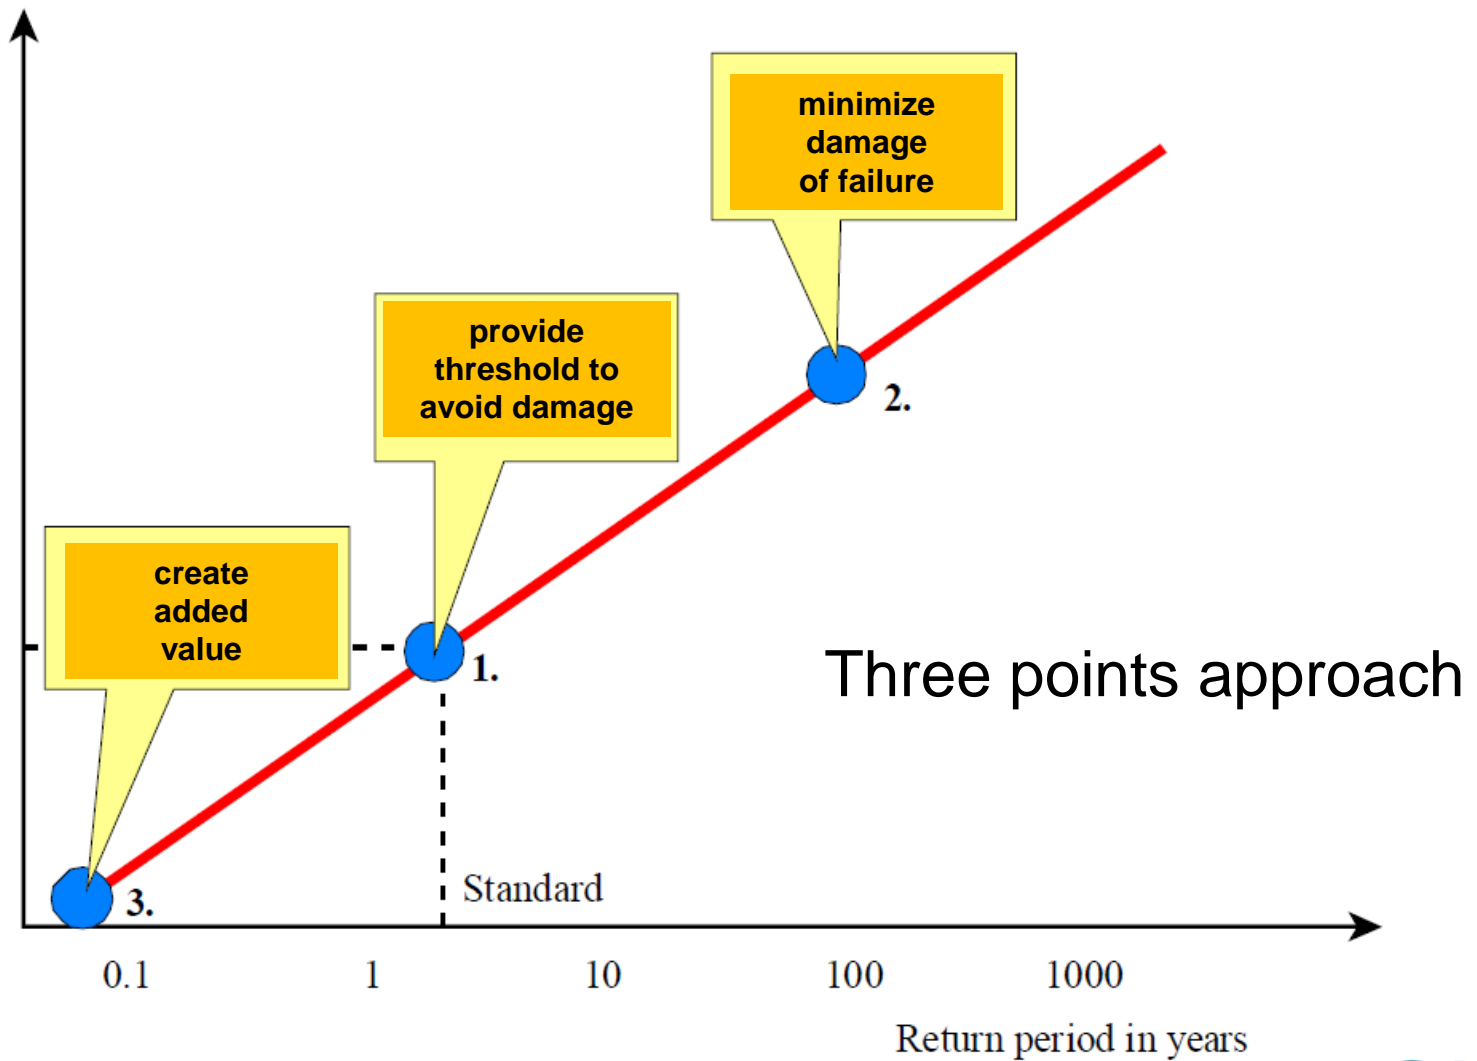

Urban areas:

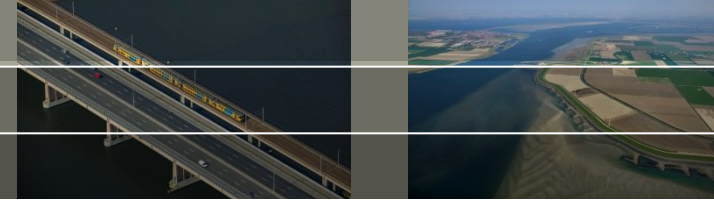

Extremely vulnerable to climate change

- Increasing exposure
- Increased damage sensitivity
- Low adaptability

New paradigm for planning and design

Making space for water

=

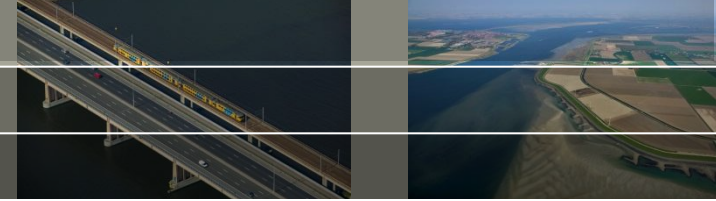

reducing risks,

+

creating resilience

+

**creating added value
for many stakeholders**

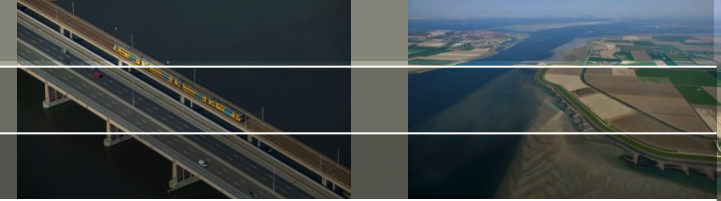

How to do it?

by Making Space for Water

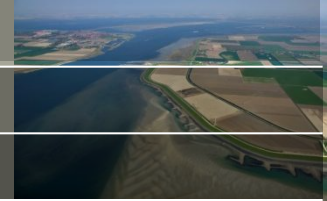

Examples from the Netherlands

Bioswales, water harvesting

Building on / above water

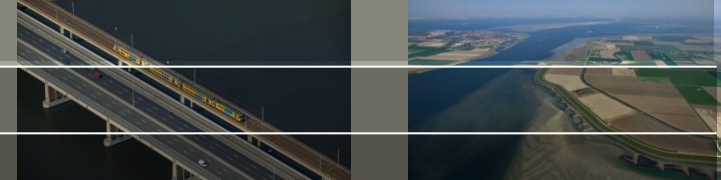

Creating resilience by *Making space for water*

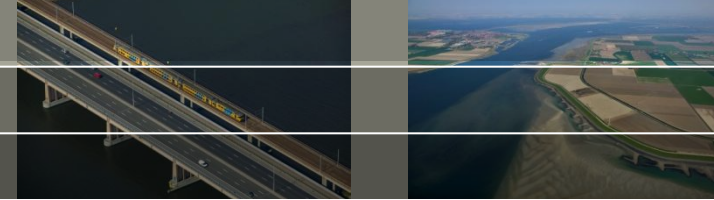

move from
“full cost pricing”
discussion to
maximizing value
and
fair benefits sharing

So, let's get started

Thank you for your attention
